

Humpback whales are very big. Adults can be 16 metres long and weigh up to 35,000 kilos! And even babies are very big.

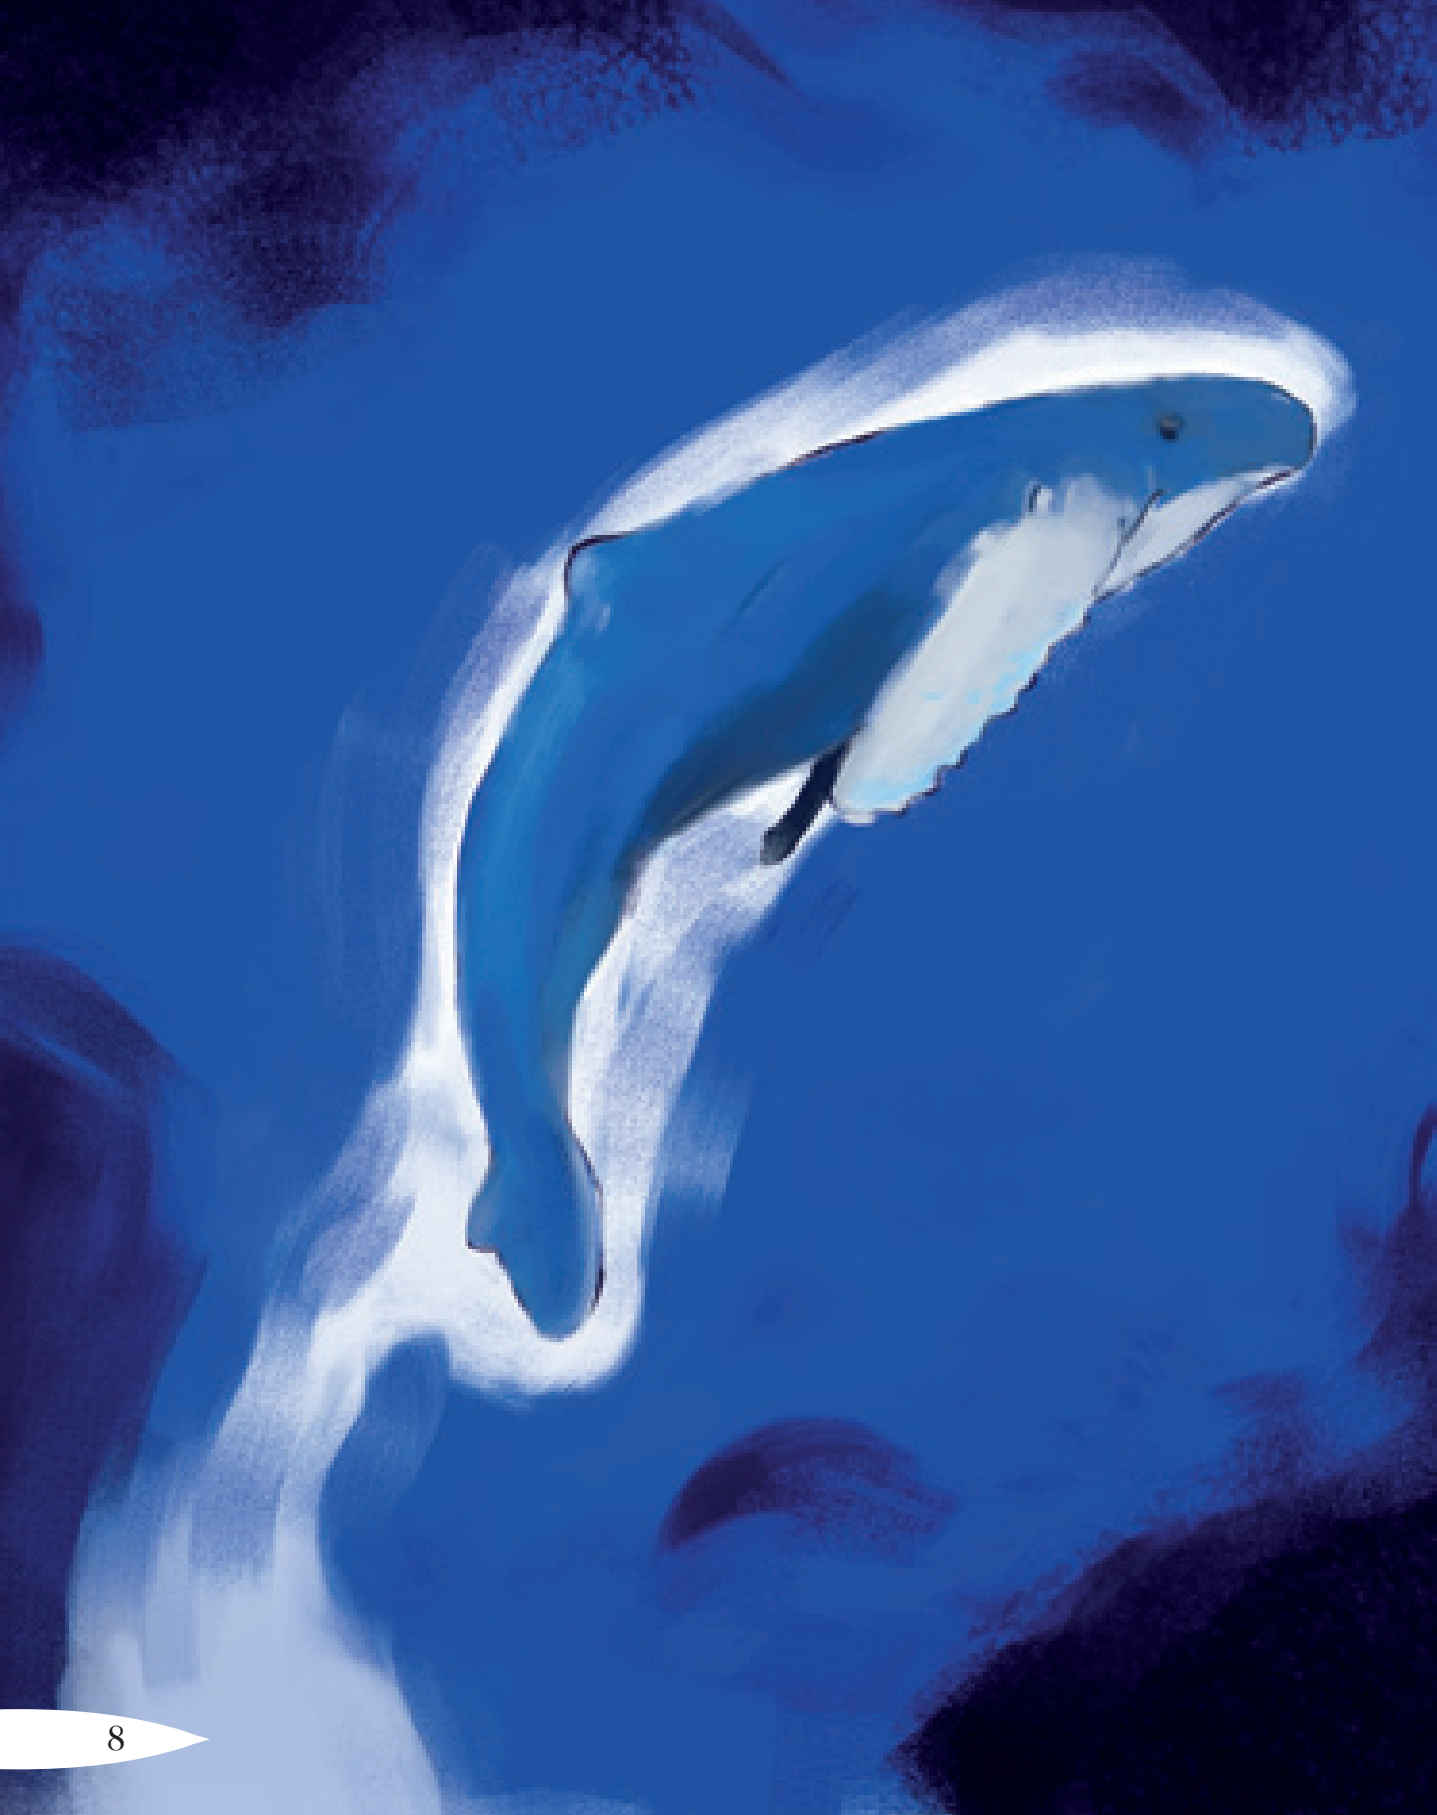

They swim long distances looking for food and warm seas. They often swim together in a group called a pod.

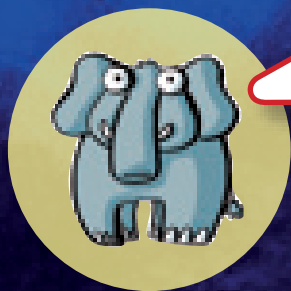

What are whales? Tick (✓).

- fish
- mammals
- reptiles

Last week, there was an oil spill and a baby whale, or calf, nearly died. The water was dirty and he swam away from the other whales and got lost.

The calf tried to find his mother but he couldn't see anything. He was very tired so he let the water carry him. He was afraid.

Draw lines between the animals and the babies.

dog ●	● kitten
bird ●	● puppy
cat ●	● chick

The next morning, the calf stranded on a beach in Didgery Bay. He couldn't breathe and he was too hot.

Look at the picture.

Find

- a starfish
- a shell
- a crab
- some seaweed.
